Working with CSS and Links

Consider the next HTML code:

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
 <Head>
<title> Question2 </title>
<STYLE type="text/css">
        #red { color:red; }
        #green { color:green; }
        #orange { color:orange; }
        #pink { color:pink; }
        #gray { color:gray; }
        #cyan { color:cyan; }
        #magenta { color:magenta; }
        #yellow { color:yellow; }
</style>
 </Head>
 <Body>
<ul><li><a href="#" >blue</a></li><ul>
<ol>
        <li><a href="#" id="red"> red </a></li>
        <li><a href="#" id="green"> green </a></li>
        <li><a href="#" id="orange"> orange </a></li>
</ol>
<ul><li><a href="#" id="pink"> pink </a></li><ul>
<ol>
        <li><a href="#" id="gray">gray</a></li>
        <li><a href="#" id="cyan">cyan</a></li>
        <li><a href="#" id="magenta">magenta</a></li>
</ol>
<ul><li><a href="#" id="yellow">yellow</a></li><ul>
 </Body>
</HTML>
```

```
div.div1{ background-color:yellow;
          width:400px;
          text-align:center;
          border:3px solid;
          border-color:lightgrey black black lightgrey;
          padding:10px;
          margin:5px; }

.div11{ background-color:white;
          padding:10px;
          margin:10px auto;
          color:blue; }

table {  border:3px solid;
        border-color:lightgrey black black lightgrey;}
```

Create the corresponding **XHTML** web page, using appropriate web tags (div, table, ul, ol, li), and add the CSS style (internal, external, inline), respecting the format, spacing, borders and colors.
Use <span> tag to format text and colspan to format <td> elements. Set the background color for visited and unvisited links to "yellow", and the background color for the hover and active link states to "green".

Validate all web files (html, css) on W3C web site. Upload your files by LEA of Omnivox

Thank you
